

PEDIGREE

WAYFARERS TAILORMADE BULLET NA P-II

Wirehaired Pointing Griffon
Male

The pedigree chart is a symmetrical, tree-like structure. It begins with a central vertical line that splits into two horizontal lines extending to the left and right. Each of these horizontal lines then splits again into two more horizontal lines, one above and one below the central axis. This creates a total of four paths on each side of the central axis. The paths are represented by horizontal lines that converge and diverge at specific points, forming a symmetrical, tree-like structure. The entire chart is enclosed within a decorative border featuring a repeating pattern of the breed's name.
